

[Document Name] Abstract

[Abstract]

[Problem to be Solved]

With a relatively simple configuration, a palm trunk is divided into a vascular bundle and a soft tissue in a mass production manner, enabling the total use of the palm trunk.

[Solution]

Crushers 4 and 5 crush a thin plate obtained by skiving an oil palm trunk by a rotary lathe 1, and a gravitational classifier 7 gravitationally classifies fragments, thereby recovering a vascular bundle from gravitationally classified heavy objects and recovering a soft tissue from gravitationally classified light objects.
