(54) Title: A CARTRIDGE DISPENSING GUN

(57) Abstract

A manually operable cartridge dispensing gun (1) for cartridges of the kind containing two components, said gun including a bed (2) to captively retain the cartridge, a manually operable drive assembly to advance inner (4) and outer (5) concentrically arranged piston pushers against corresponding pistons in the cartridge, the outer piston pusher (5) being dimensioned to bear against a circumferentially outermost piston in the cartridge and including a central aperture to accommodate the inner piston pusher (4) of a first dimension for use with an inner piston of a cartridge having a first component ratio, said inner piston pusher (4) being selectively reconfigurable to a second, reduced, dimension for use with an inner piston of a cartridge having a second component ratio.
