

ABSTRACT

A website inspection server 10 according to one embodiment of the present invention assists a user in inspecting a website. The server 10 provides, to a user who operates a user terminal 30 communicatively connected to the server 10 through a communication network 20, a website inspection service in which a website 22 specified by the user is inspected. The server 10 sets screen transitions for inspecting the website 22 to be inspected, and a predetermined screen for displaying information on the screen transitions displays an element included in a screen included in the screen transitions, a transition in response to selection of the element not being included in the screen transitions, as an addable element, a new transition in response to selection of the addable element being addable to the screen transitions. This allows the user to easily modify the set screen transitions.
