(54) Title: INTRACORPOREAL INDWELLING EQUIPMENT

(57) Abstract: The present invention provides an intracorporeal indwelling equipment having an internal holding member (20) to be set in the stomach. Said internal holding member (20) is composed of flexible ribbon-shaped members (22a), (22b) and flexible membrane-like members (23a), (23b) that are set on the portions of ribbon-shaped member (22a), forming a dome-shaped portion. In the center of the outer periphery (25a) of membrane-like member (23a), a notch (26a) and folding creases are formed to assist in deployment and help prevent the generation of ulcers and buried bumper syndrome.
