(54) Title: INTERACTION METHOD AND APPARATUS, DEVICE, AND STORAGE MEDIUM

(54) 发明名称: 交互方法、装置、设备及存储介质

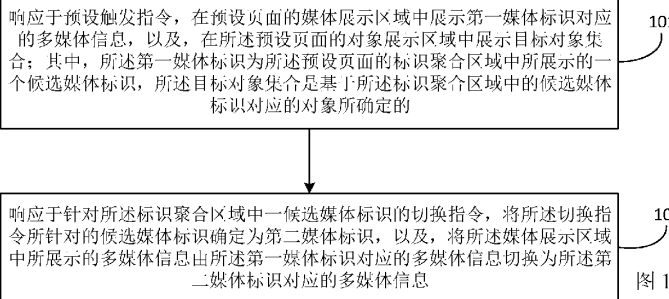

图 1

- 101 In response to a preset trigger instruction, display multimedia information corresponding to a first media identifier in a media display region of a preset page, and display a target object set in an object display region of the preset page, the first media identifier being a candidate media identifier displayed in an identifier aggregation region of the preset page, and the target object set being determined on the basis of objects corresponding to candidate media identifiers in the identifier aggregation region
- 102 In response to a switching instruction for a candidate media identifier in the identifier aggregation region, determine the candidate media identifier at which the switching instruction is directed to be a second media identifier, and switch the multimedia information displayed in the media display region from the multimedia information corresponding to the first media identifier to multimedia information corresponding to the second media identifier

(57) Abstract: The present disclosure relates to the technical field of computers, and provides an interaction method and apparatus, a device, and a storage medium. The interaction method comprises: in response to a preset trigger instruction, displaying multimedia information corresponding to a first media identifier in a media display region of a preset page, and displaying a target object set in an object display region of the preset page, the target object set being determined on the basis of objects corresponding to candidate media identifiers in an identifier aggregation region; and, in response to a switching instruction for a candidate media identifier in the

identifier aggregation region, determining the candidate media identifier at which the switching instruction is directed to be a second media identifier, and switching the multimedia information displayed in the media display region from the multimedia information corresponding to the first media identifier to multimedia information corresponding to the second media identifier. By using the above technical solution, the convenience of viewing information and the efficiency of switching information can be improved.

(57) 摘要: 本公开提供一种交互方法、装置、设备及存储介质, 涉及计算机技术领域。该交互方法包括: 响应于预设触发指令, 在预设页面的媒体展示区域中展示第一媒体标识对应的多媒体信息, 以及, 在预设页面的对象展示区域中展示目标对象集合, 目标对象集合是基于标识聚合区域中的候选媒体标识对应的对象所确定的, 响应于针对标识聚合区域中一候选媒体标识的切换指令, 将切换指令所针对的候选媒体标识确定为第二媒体标识, 以及, 将媒体展示区域中所展示的多媒体信息由第一媒体标识对应的多媒体信息切换为第二媒体标识对应的多媒体信息。通过采用上述技术方案, 可以提升信息查看的便捷性以及信息切换效率。
