(54) Title: EASY OPEN APPARATUS FOR MEDICAMENT STORAGE CARTON

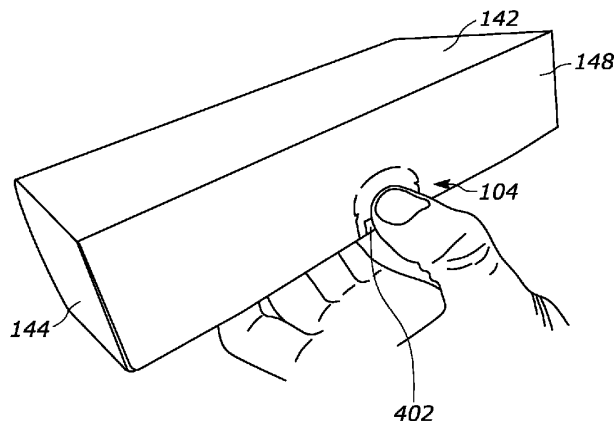

FIG. 5

(57) Abstract: A carton for medicament storage includes a bottom box and a lid. The bottom box includes a bottom wall, a first sidewall, a second sidewall, a back wall, and a front wall. The carton also includes a lid coupled to the bottom box and movable between an open position and a closed position. The bottom box is closed by the lid when the lid is in the closed position. Additionally, the carton includes a release tab comprising a portion of the one of the lid and the second front wall and being defined by a perforated line in the one of the lid and the bottom box. The carton also may include an adhesive positioned on at least a part of the release tab and selectively coupling the lid and the bottom box. When the carton is in the closed position, the release tab is secured to the one of the lid and the bottom box via the perforation and is secured to the other of the lid and the bottom box via the adhesive. Alternatively, when the lid is in the open position, the release tab is separated along the perforated line from the one of the lid and the bottom box and is secured to the other of the lid and the bottom box via the adhesive.
