

**CEREAL-BASED MILK, AND PRODUCTION METHOD AND RICHNESS-
ENHANCING METHOD FOR SAME**

Abstract

As a technique that can improve the oily mouthfeel of cereal milk while controlling a total oil/fat content, the present invention provides cereal milk comprising a saccharified cereal product and an oil/fat, wherein the cereal milk comprises 0.5 to 2.8% of a lipid and comprises at least a saturated fatty acid-rich vegetable oil/fat as the oil/fat, and a ratio of a saturated fatty acid to a total fatty acid is 20% or more.
