(54) **Title:** DATA FORWARDING FOR LTM

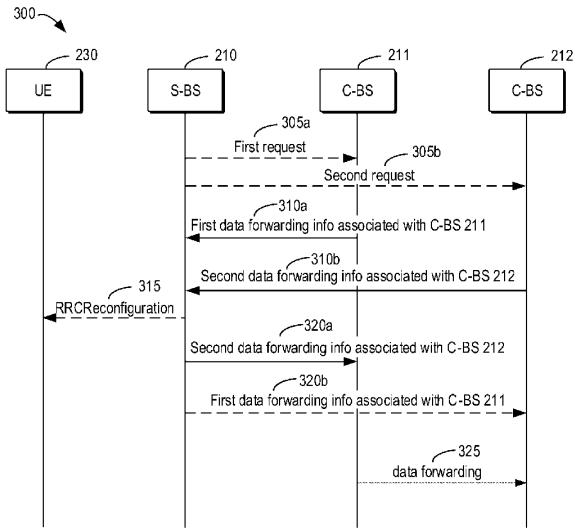

FIG. 3

(57) **Abstract:** Example embodiments of the present disclosure relate to base stations, methods, apparatuses, processors, and computer readable medium for data forwarding for subsequent LTM procedure. In the solution, a base station, operating as a source base station for configuring LTM for a UE, may receive second data forwarding information associated with a second candidate base station from the second candidate base station, and may further transmit at least the second data forwarding information associated with the second candidate base station to the first candidate base station. As such, the data forwarding performed by the first candidate base station can be enabled, and the data delay for the UE during the LTM can be reduced.
