

DATABASE SYSTEM HAVING SELECTABLE TERMS FOR USER INPUTS AND METHOD THEREOF

5

Abstract

A database system (10), a method (50) and a product (70) having a computer program with computer usable medium for processing user inputs based upon selectable terms associated with the database system (10). The database system (10) has a storage media (12), user workstations (14a,14b) and a controller (16). The
10 controller (16) processes user inputs from a user input page (30) that is provided via a display (24a) of the user workstation (14a). These user inputs include selectable terms provided using menus respectively associated with selectable term input fields displayed on the user input page (30). A user selects a selectable term from a menu of a selectable term input field. Information associated with one or more selected
15 terms are then processed by the controller (16) and provided to the user via the display (24).
