

ABSTRACT

RESIN MOLDED PRODUCT MANUFACTURING APPARATUS, RESIN MOLDING SYSTEM, AND RESIN MOLDED PRODUCT MANUFACTURING METHOD

5

There is provided a resin molded product manufacturing apparatus that can have a simplified configuration, resin molding system, and resin molded product manufacturing method, that allow pressure to be applied in a wider range. The resin
10 molded product manufacturing apparatus allows a second platen to be moved in the vertical direction by an ascending and descending mechanism and allows an intermediate plate to be moved in the vertical direction via a ganging mechanism along with an operation of an arm attached to the second platen.
