

POLYMERIC MICELLE CARRIER COMPOSITION AND POLYMERIC MICELLE
COMPOSITION

ABSTRACT

5

A polymeric micelle carrier composition comprises i) a
block copolymer having a hydrophilic polymer chain segment and
a hydrophobic polymer chain segment; ii) a charged surfactant;
and iii) a fatty oil. The carrier composition can be applied
10 as a base material of a cosmetic composition or a
pharmaceutical composition and excels in loadability of non-
lipophilic drugs. One example of a non-lipophilic drug is a
hair growth promoting peptide.
