(54) Title: SITE ACCEPTANCE TEST GENERATION SYSTEMS AND METHODS

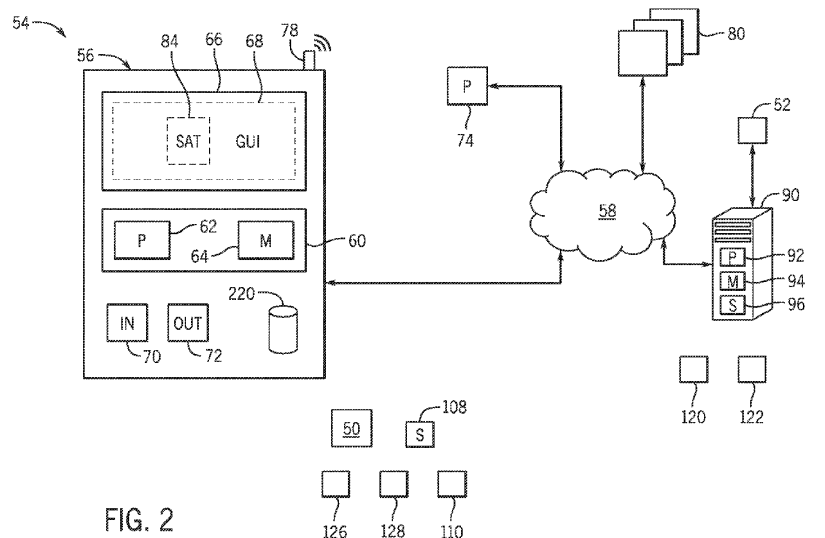

FIG. 2

(57) Abstract: A system (54) to facilitate inspection of an attraction (12) in an environment (10) includes a processing system with one or more processors (30, 62, 92) and memory (26, 60, 94) storing instructions executable by the processing system to cause the processing system to receive a source file (96) from a server (90), wherein the source file (96, 120) prescribes one or more target specifications for one or more operational characteristics of a component (50) of the attraction (12). The instructions are executable by the processing system to cause the processing system to generate a site acceptance test (SAT) (84) for the component (50) based on the source file (96, 120), wherein the SAT (84) includes one or more inspection criteria that correspond to the one or more operational characteristics of the component (50).
