ABSTRACT OF DISCLOSURE

TITLE OF INVENTION: ELECTRONIC WATCH WITH MINUTE REPEATER FUNCTION

The present invention concerns an electronic watch with a minute-repeater function where the strike is accompanied by characteristic movements of the hands. In a simple alternative embodiment, the watch comprises two independent hour and minute hands, driven by their own motor. When the minute-repeater function is activated, the two hands come first of all to 0, then return to their initial position making movements corresponding to each type of strike, hour strike = + 1 hour, 15 minutes strike = + 15 minutes, etc.
