Abstract

The apparatus for the simultaneous distillation and
5 extraction of volatile substances from an aqueous medium to
a water-immiscible solvent medium, comprises :

separate means for mixing and decanting the phases,

10 a distillation column for the solvent,

an extraction cell provided with means for stirring,

separate condensers for steam and solvent and

15

a multi-purpose configuration permitting continuous or batch
operations to be carried out at reduced pressure or at
atmospheric pressure.
