(54) Title: IMPROVEMENTS IN OR RELATING TO WOUND TREATMENT APPARATUS

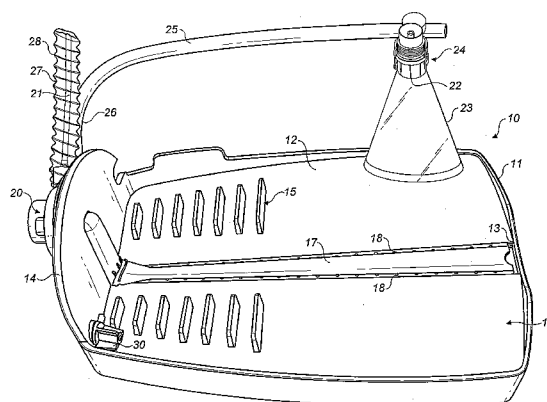

FIG. 1

(57) Abstract: The disclosure relates to a wound treatment apparatus comprising a tray (10) having a region adapted to receive a patient's body part (e.g. a leg) for treatment, a spray head (22, 23) for applying a spray of a gas containing liquid onto the body part and a covered well (13) in the tray having inlets (18) for surplus liquid and gas from the spray. Outlets are provided in communication with the well for gas and liquid respectively for connection to suction means to draw surplus liquid and gas from the well, and a unitary coupling (20) provides a plurality of fluid connections including a liquid supply for the spray head and liquid and gas withdrawal from said well outlets.
