ABSTRACT

A remedy for tragomaschalia characterized in that it contains an effective amount of adrenocorticosteroid and from 1 to 10% by weight of an extraction product from lactic acid fermentation based on one gram of a base. The extraction product from lactic acid fermentation has a metabolism product of lactic acid bacteria and ingredients of bacterial cells of lactic acid bacteria together. By inhibition of the secretion itself of a odoriferous steroid which is the cause of tragomaschalia, remetabolism and generation of such a steroid compound by tragomaschalia bacteria are completely eliminated, and there is little fear of adverse drug reactions by the adrenocorticosteroid used for that purpose.
