(54) Title: METHOD AND SYSTEM FOR OBTAINING RADIO ACCESS NETWORK (RAN) INFORMATION OF CELLULAR TELECOMMUNICATIONS NETWORKS

FIG. 1

(57) Abstract: A system for obtaining information relating to an idle mobile station in a cellular network is provided. The system includes a computing platform which is in communication with a radio network controller of the cellular network. The computing platform is configured for (i) generating and sending an input signal through the radio network controller to the radio access network; and (ii) identifying in data outputted by the radio network controller an output signal resulting from the input signal, the output signal including information relating to at least one idle mobile station.
