(54) Title: HEAD MASSAGING DEVICE

(57) Abstract: A head massaging device (10) comprises a plurality of resilient fingers (12) defining a head receiving space (14) having an opening (16) at one end formed by the relative juxtaposition of the respective free ends (18) of the fingers (12). The opening (16) is smaller than the size of the head so that in use when the device (10) is lowered onto the head so that the head enters the space (14) through the opening (16), the free ends (18) of the fingers (12) apply pressure to, and thus massage, the head. A vibrator (26) is disposed in a handle (24) which also receives opposite ends (20) of the fingers (12). The vibrator can be switched ON and OFF by a switch (30) provided in the handle (24). When the vibrator is switched ON vibrations generated thereby are transmitted along the fingers (12) form ends (20) to the free ends (18).
