(54) Electrophotographic photosensitive member and electrophotographic apparatus using the same.

(57) An electrophotographic photosensitive member, comprising: a support, and an intermediate layer and a photosensitive layer disposed on the support in this order; the intermediate layer comprising: a coated powder comprising a coating layer and barium sulfate fine particles coated with the coating layer; and the coating layer comprising tin oxide. The above intermediate layer is usable for constituting an electrophotographic apparatus providing stable potential properties and good image quality under overall environmental conditions including low-temperature and low-humidity condition to high-temperature and high-humidity condition.
