- (54) **Title:** PERFORMING SEARCH BASED ON POSITION INFORMATION

FIG. 9A

- (57) **Abstract:** Provided are techniques for performing a search based on position information. A search request that provides location information for a region of a screen image is received (900). A selection of a type indicator is received, where the type indicator indicates one of a text item and an image (902). In response to the type indicator indicating the text item (904), one or more of the text item and a date and time are received (906). A search is performed using the location information and the one or more of the text item and the date and time to identify one or more screen image identifiers of one or more corresponding screen images of a plurality of screen images (908). The one or more screen image identifiers are used to retrieve the one or more corresponding screen images (910). The one or more corresponding screen images are displayed as search results (912).
