

COMMUNICATION METHOD AND APPARATUS, AND READABLE STORAGE MEDIUM

ABSTRACT

Embodiments of this application provide a communication method and apparatus, and a
5 readable storage medium. The method includes: A first device sends information about a first
priority and a second priority to a second device. The first priority is used to assist the second
device in selecting a resource for sidelink transmission, the information about the first priority is
carried in SCI and/or a MAC CE, and the second priority is a physical layer priority of the first
device. In the method, the first device sends the information about the first priority and the second
10 priority to the second device. The information about the first priority is used to assist the second
device in selecting the resource for sidelink transmission. Therefore, the second device may further
select, based on the information about the first priority, the resource for sidelink transmission, to
implement resource selection of the second device.
