

ABSTRACT

Embodiments of the disclosure relate to an audio processing method and apparatus, a device, and a storage medium. The method provided herein includes: obtaining a first media content input by a user, the first media content including first audio content; and providing a second media content based on a selection of a target style by the user, the second media content including a second audio content generated based on the first audio content, the second audio content having the same timbre as the first audio content, and the second audio content having at least one audio attribute corresponding to the target style. In this way, the embodiments of the disclosure can improve the voice changing effect on the basis of retaining the timbre.
