

CLAIMS

1. A method for logging into a loss reported account, comprising:
 - obtaining an account loss report request comprising a target account name;
 - reporting the account corresponding to the target account name as lost;
 - generating an operation code according to the target account name;
 - obtaining a user contact address associated with the account corresponding to the target account name;
 - sending the generated operation code to the user contact address;
 - receiving a login request sent by a client, the login request comprising the operation code;
 - determining whether the operation code meets a preset condition;
 - in response to determining that the operation code meets the preset condition, obtaining the loss reported account corresponding to the operation code; and
 - logging in to the lost reported account on a network server.
2. The method of claim 1, wherein the obtained account loss report request is obtained in response to a user associated with the account perceiving that the account may have a risk of being leaked or stolen.
3. The method of claim 2, wherein performing loss report for the account corresponding to the target account name comprises freezing the account.
4. The method of claim 1, wherein the user contact address comprises at least one of a user mobile phone number, a user email address, and a user instant messaging account.
5. The method of claim 1, wherein generating the operation code according to the target account name specifically comprises converting the target account name by using a preset algorithm to obtain a unique operation code.
6. The method of claim 1, wherein after generating the operation code according to the target account name, the login method further comprises storing the generated operation code in a preset operation code table.

7. The method of claim 1, wherein the preset condition comprises the operation code being in a preset operation code table.
8. The method of claim 7, wherein the preset condition comprises the number of times the operation code is used is within a preset threshold of a number of times.
9. The method of claim 1, wherein the operation code comprises a QR code.
10. The method of claim 1, wherein obtaining the loss reported account corresponding to the operation code specifically comprises obtaining the corresponding loss reported account number by querying an account table according to the operation code.
11. The method of claim 1, wherein logging in to the loss reported account on a network server specifically comprises:
 - obtaining a preset account permission according to the operation code; and
 - logging in to the loss reported account on the network server by using the preset account permission.
12. The method of claim 11, wherein the preset account permission comprises an account loss report rescission permission.
13. The method of claim 1, wherein after logging in to the loss reported account on a network server, the method further comprises generating account login information, and returning the account login information to the client.
14. An apparatus for logging into a loss reported account, comprising a plurality of modules configured to perform operations according to the method of any one of claims 1 to 13.
