Abstract

USE OF A COMPOSITION COMPRISING MICROORGANISMS TO INCREASE THE INTESTINAL PRODUCTION OF BUTYRIC ACID, FOLIC ACID OR NIACIN AND/OR DECREASE THE INTESTINAL PRODUCTION OF SUCCINIC ACID

The present invention relates to the use of a composition comprising bacteria to increase the intestinal production of butyric acid, folic acid or niacin and/or to decrease the intestinal production of succinic acid. Moreover, the present invention relates to the use of said composition for the treatment and/or prevention of an intestinal butyrate- and/or succinate- dependent pathological condition. In particular, for the treatment and/or the prevention of intestinal inflammation, diarrhoea, ulcerative colitis or intestinal colopathies.
