

ABSTRACT

The present invention relates to a novel amino acid derivative, a preparation method therefor, and a pharmaceutical composition for treating hepatitis B or D, comprising same. A compound represented by chemical formula 1, according to the present invention, has the
5 excellent effect of inhibiting the binding of HBV preS1 peptide by binding to NTCP, so as to have the effect of inhibiting the intracellular entry and cell adhesion of HBV, and thus is usable as a composition for preventing, treating, or alleviating diseases caused by HBV and HDV infection.
