(54) Title: INTERACTIVE WEARABLE DEVICES AND FACIAL COVERINGS

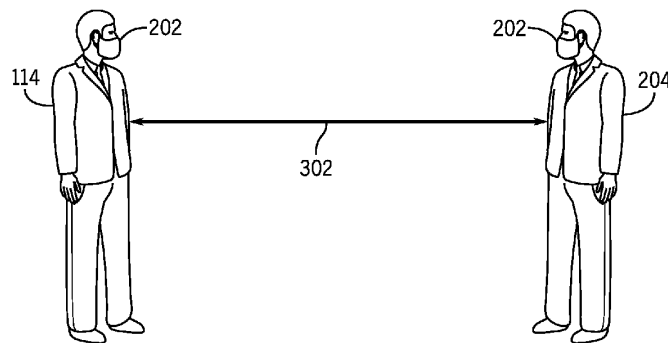

FIG. 3

(57) Abstract: In an embodiment, an interactive wearable device system (100) includes a display (110) configured to face outwardly from a wearer of the interactive wearable device system (100). The interactive wearable device system (100) also includes a location identification system configured to determine user location data related to the wearer and a separate individual. An automation controller (108) is communicatively coupled to the display (110) and the location identification system. The automation controller (108) is configured to receive the user location data provided by the location identification system. The automation controller (108) is also configured to determine the user location data satisfies at least one criteria and instruct the display (110) to display an image based on the location data satisfying the at least one criteria.
