(54) Title: COMBINING IP AND CELLULAR MOBILITY

(57) Abstract: The invention proposes a system for providing mobility to a terminal through at least two different mobility protocols, wherein a mobility gateway and a terminal share a common mobility session, said common mobility session can be updated through any of the said different mobility protocols, and each mobility protocol provides information to the terminal related to all other mobility protocols during a registration. The invention also proposes a corresponding gateway, a terminal and method.
