
First service platform
Second service platform
Processing platform
Resource pool

FIG. 1

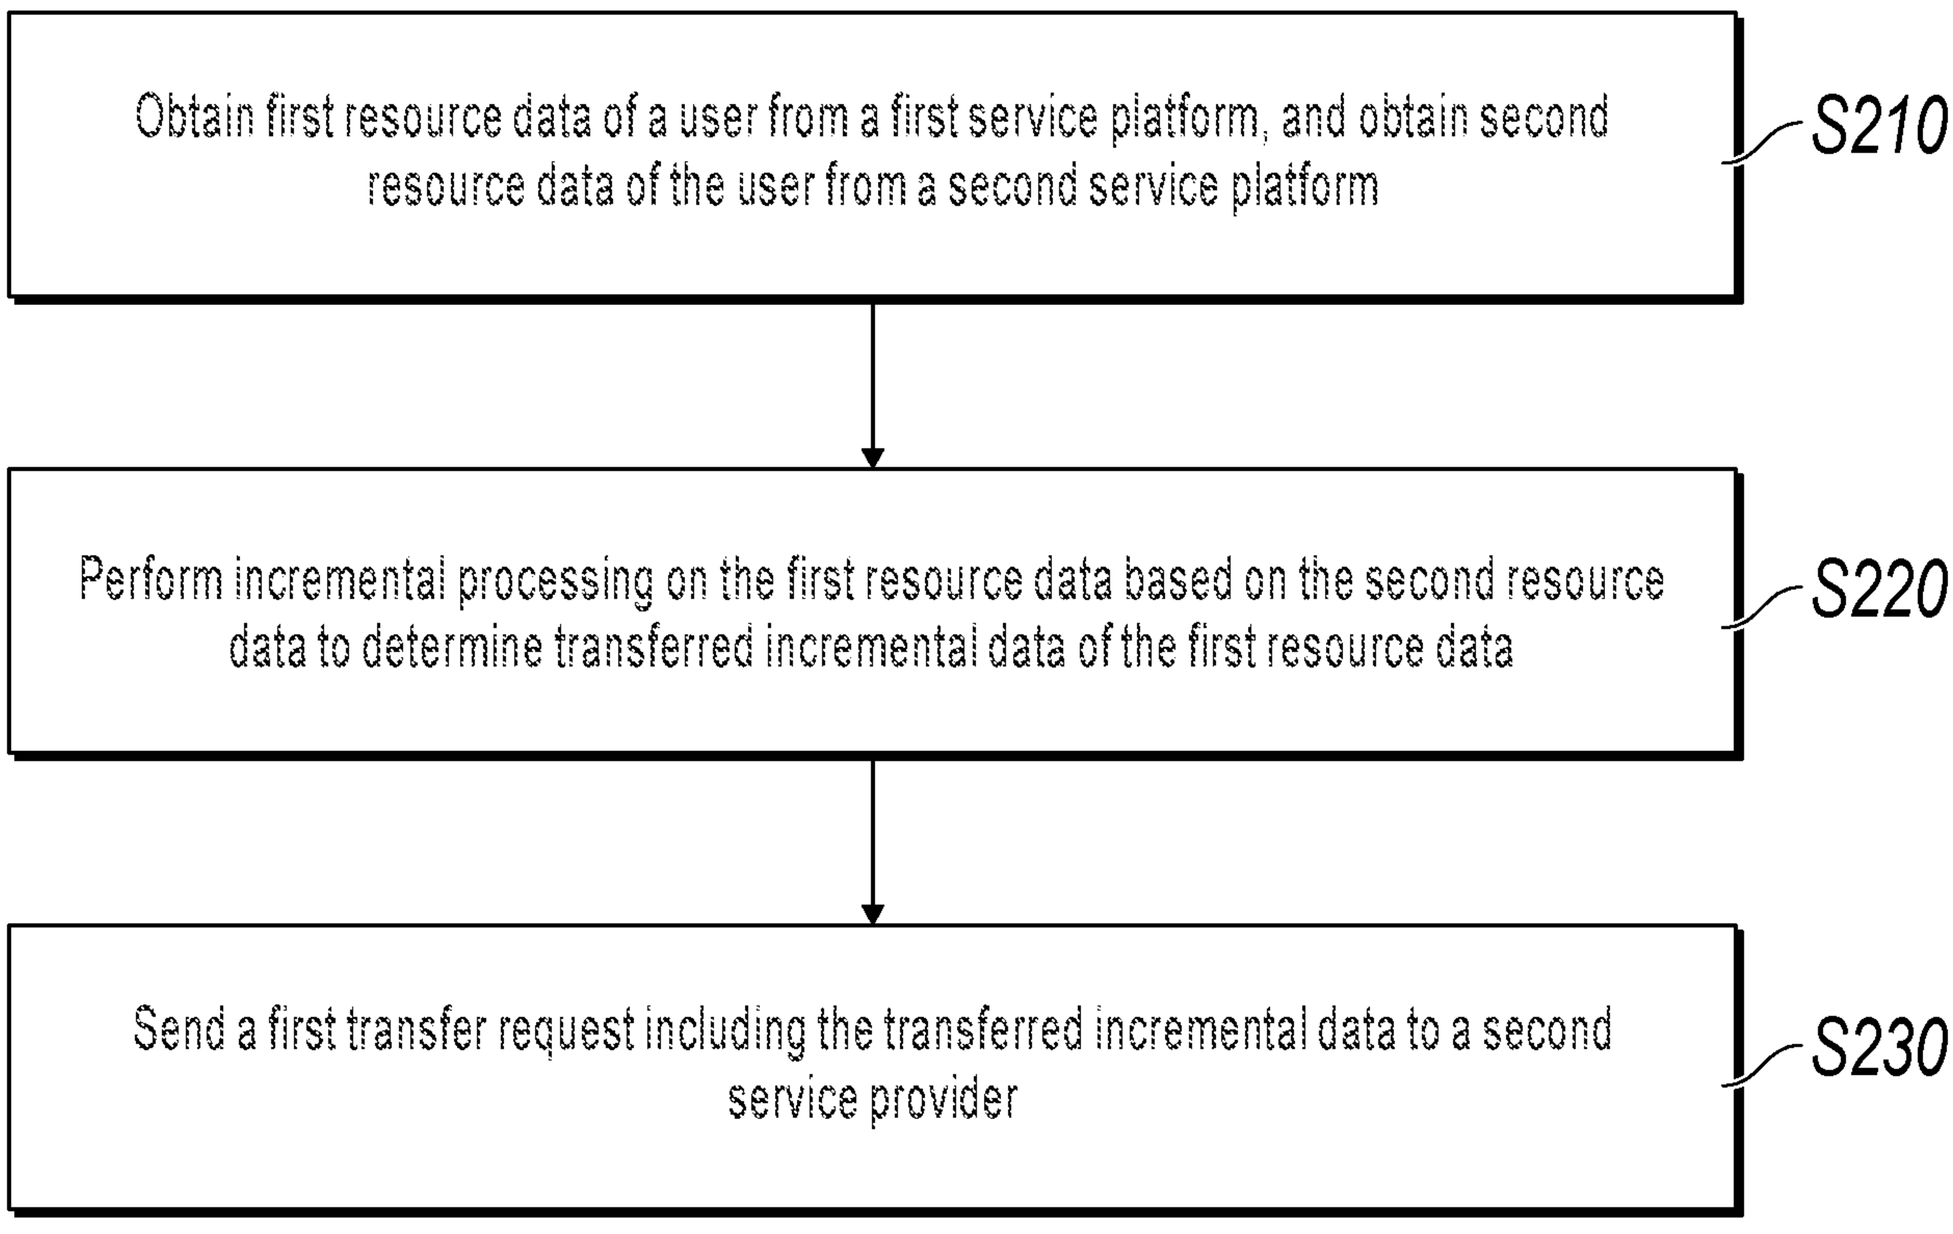

Obtain first resource data of a user from a first service platform, and obtain second resource data of the user from a second service platform
S210
Perform incremental processing on the first resource data based on the second resource data to determine transferred incremental data of the first resource data
S220
Send a first transfer request including the transferred incremental data to a second service provider
S230

FIG. 2

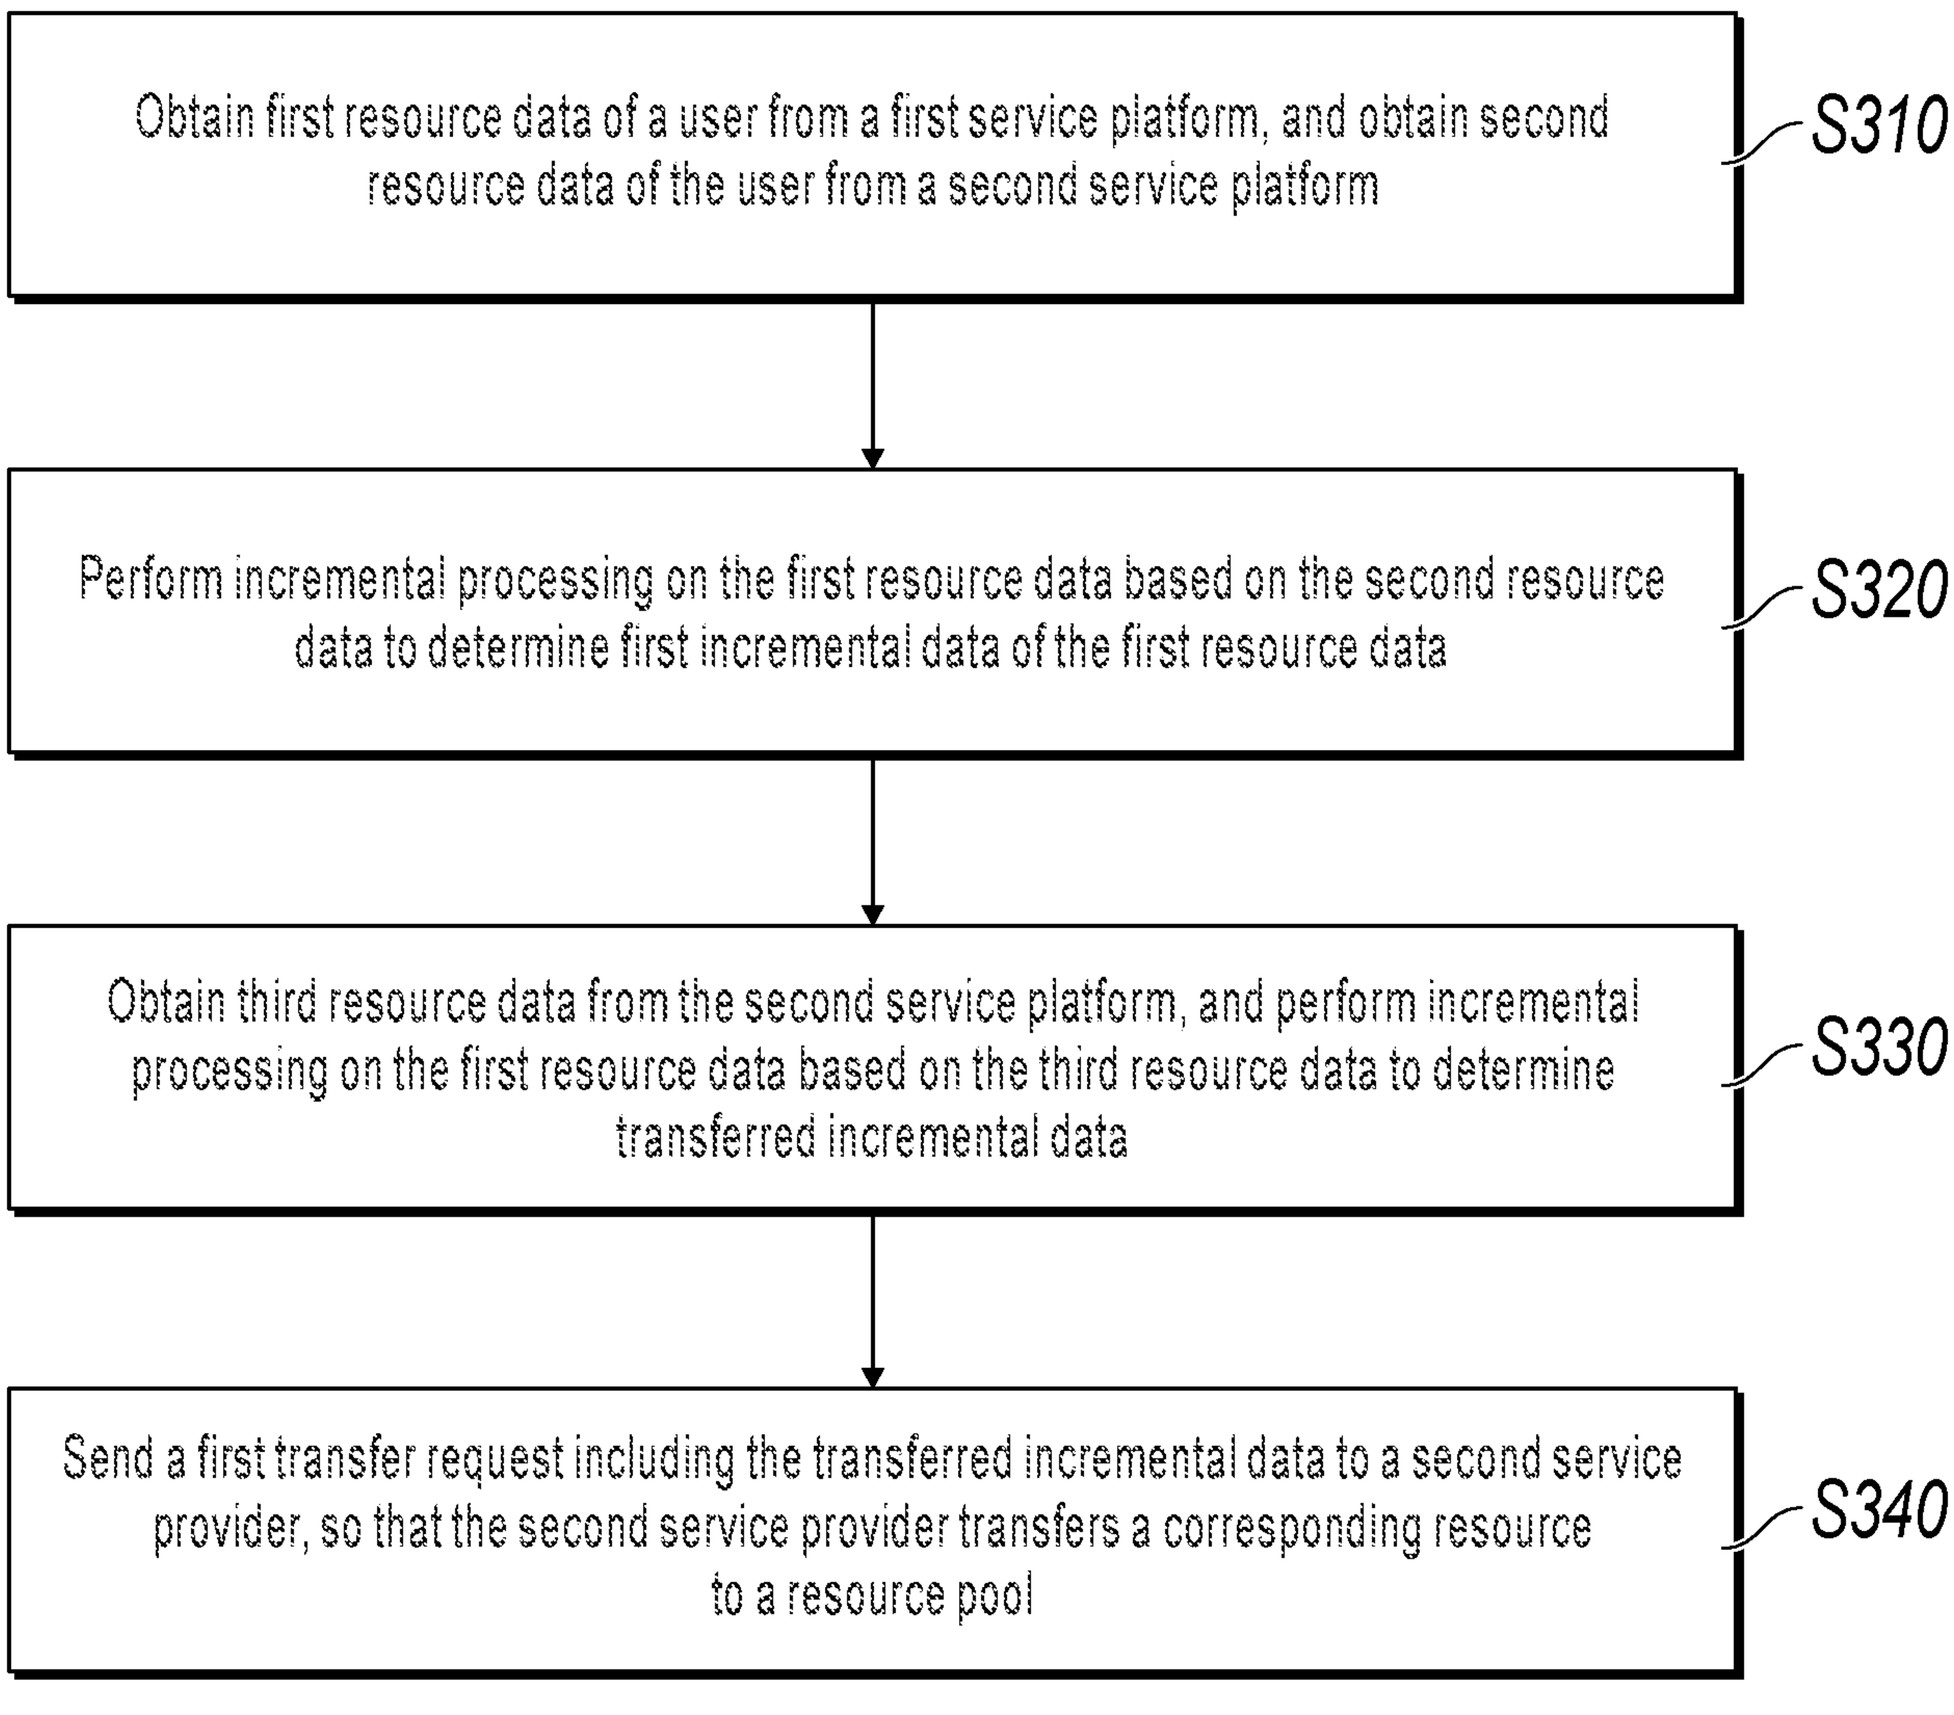

Obtain first resource data of a user from a first service platform, and obtain second resource data of the user from a second service platform
S310
Perform incremental processing on the first resource data based on the second resource data to determine first incremental data of the first resource data
S320
Obtain third resource data from the second service platform, and perform incremental processing on the first resource data based on the third resource data to determine transferred incremental data
S330
Send a first transfer request including the transferred incremental data to a second service provider, so that the second service provider transfers a corresponding resource to a resource pool
S340

FIG. 3A

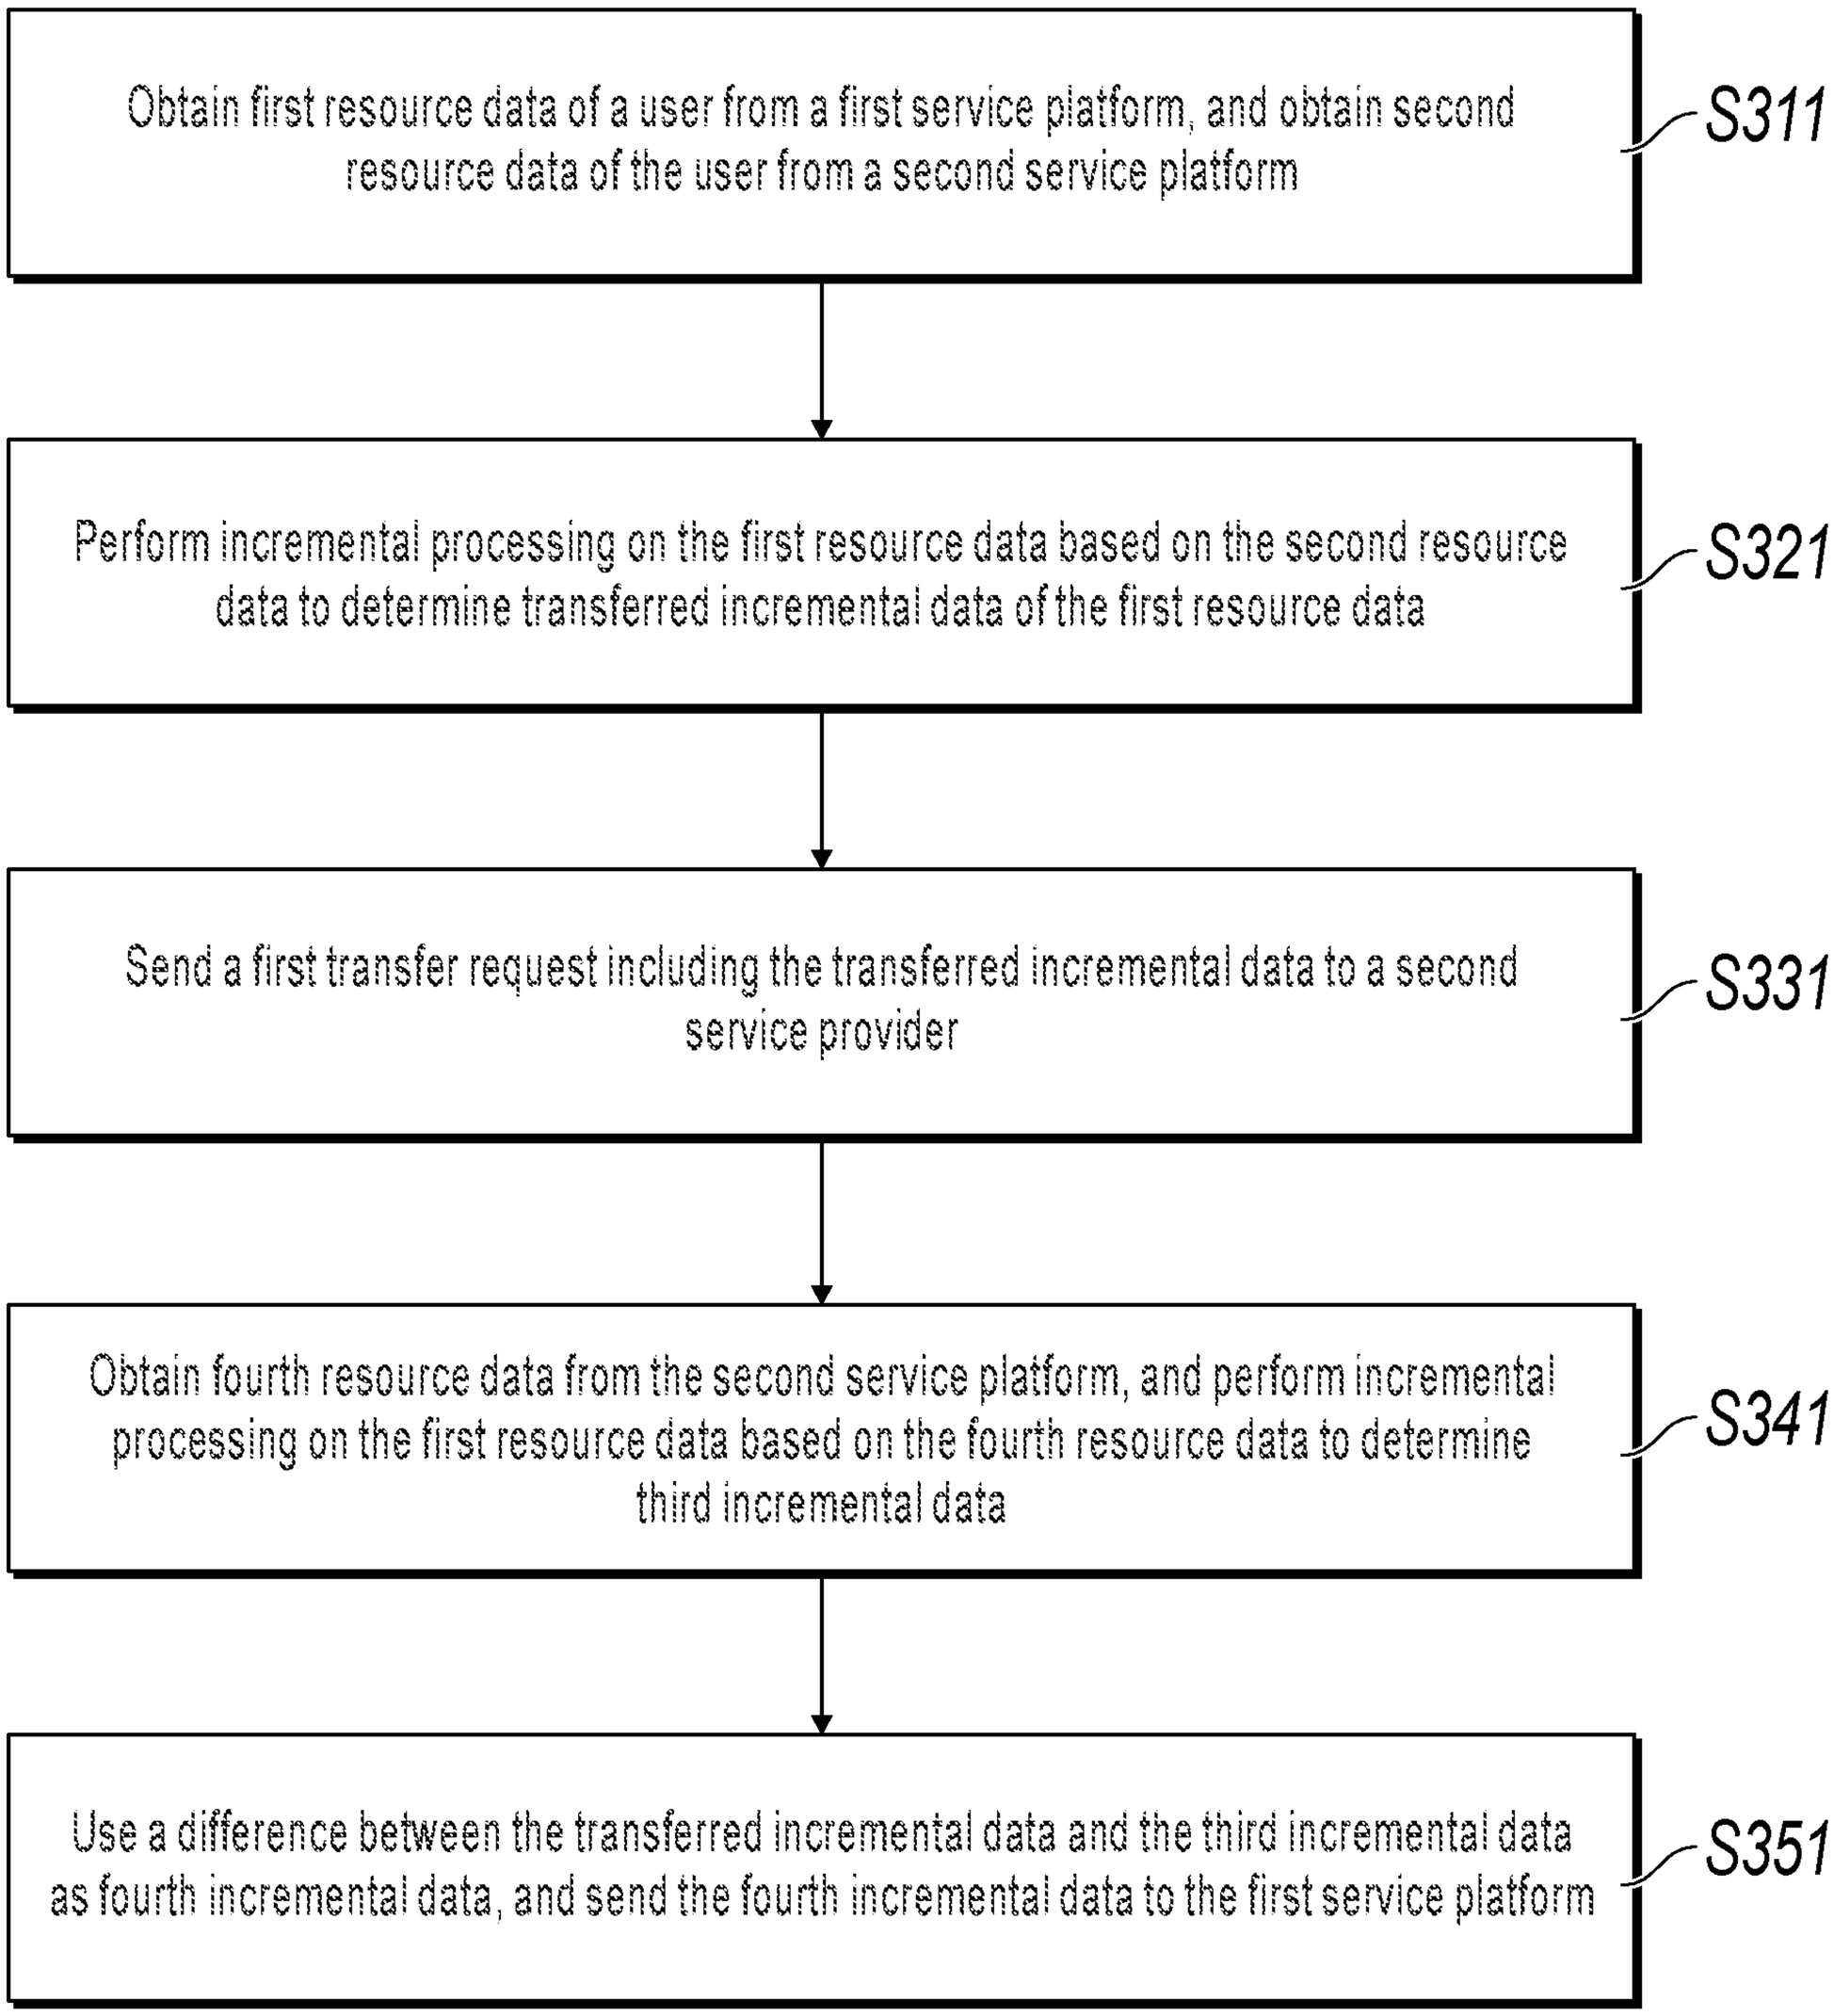

Obtain first resource data of a user from a first service platform, and obtain second resource data of the user from a second service platform
S311
Perform incremental processing on the first resource data based on the second resource data to determine transferred incremental data of the first resource data
S321
Send a first transfer request including the transferred incremental data to a second service provider
S331
Obtain fourth resource data from the second service platform, and perform incremental processing on the first resource data based on the fourth resource data to determine third incremental data
S341
Use a difference between the transferred incremental data and the third incremental data as fourth incremental data, and send the fourth incremental data to the first service platform
S351

FIG. 3B

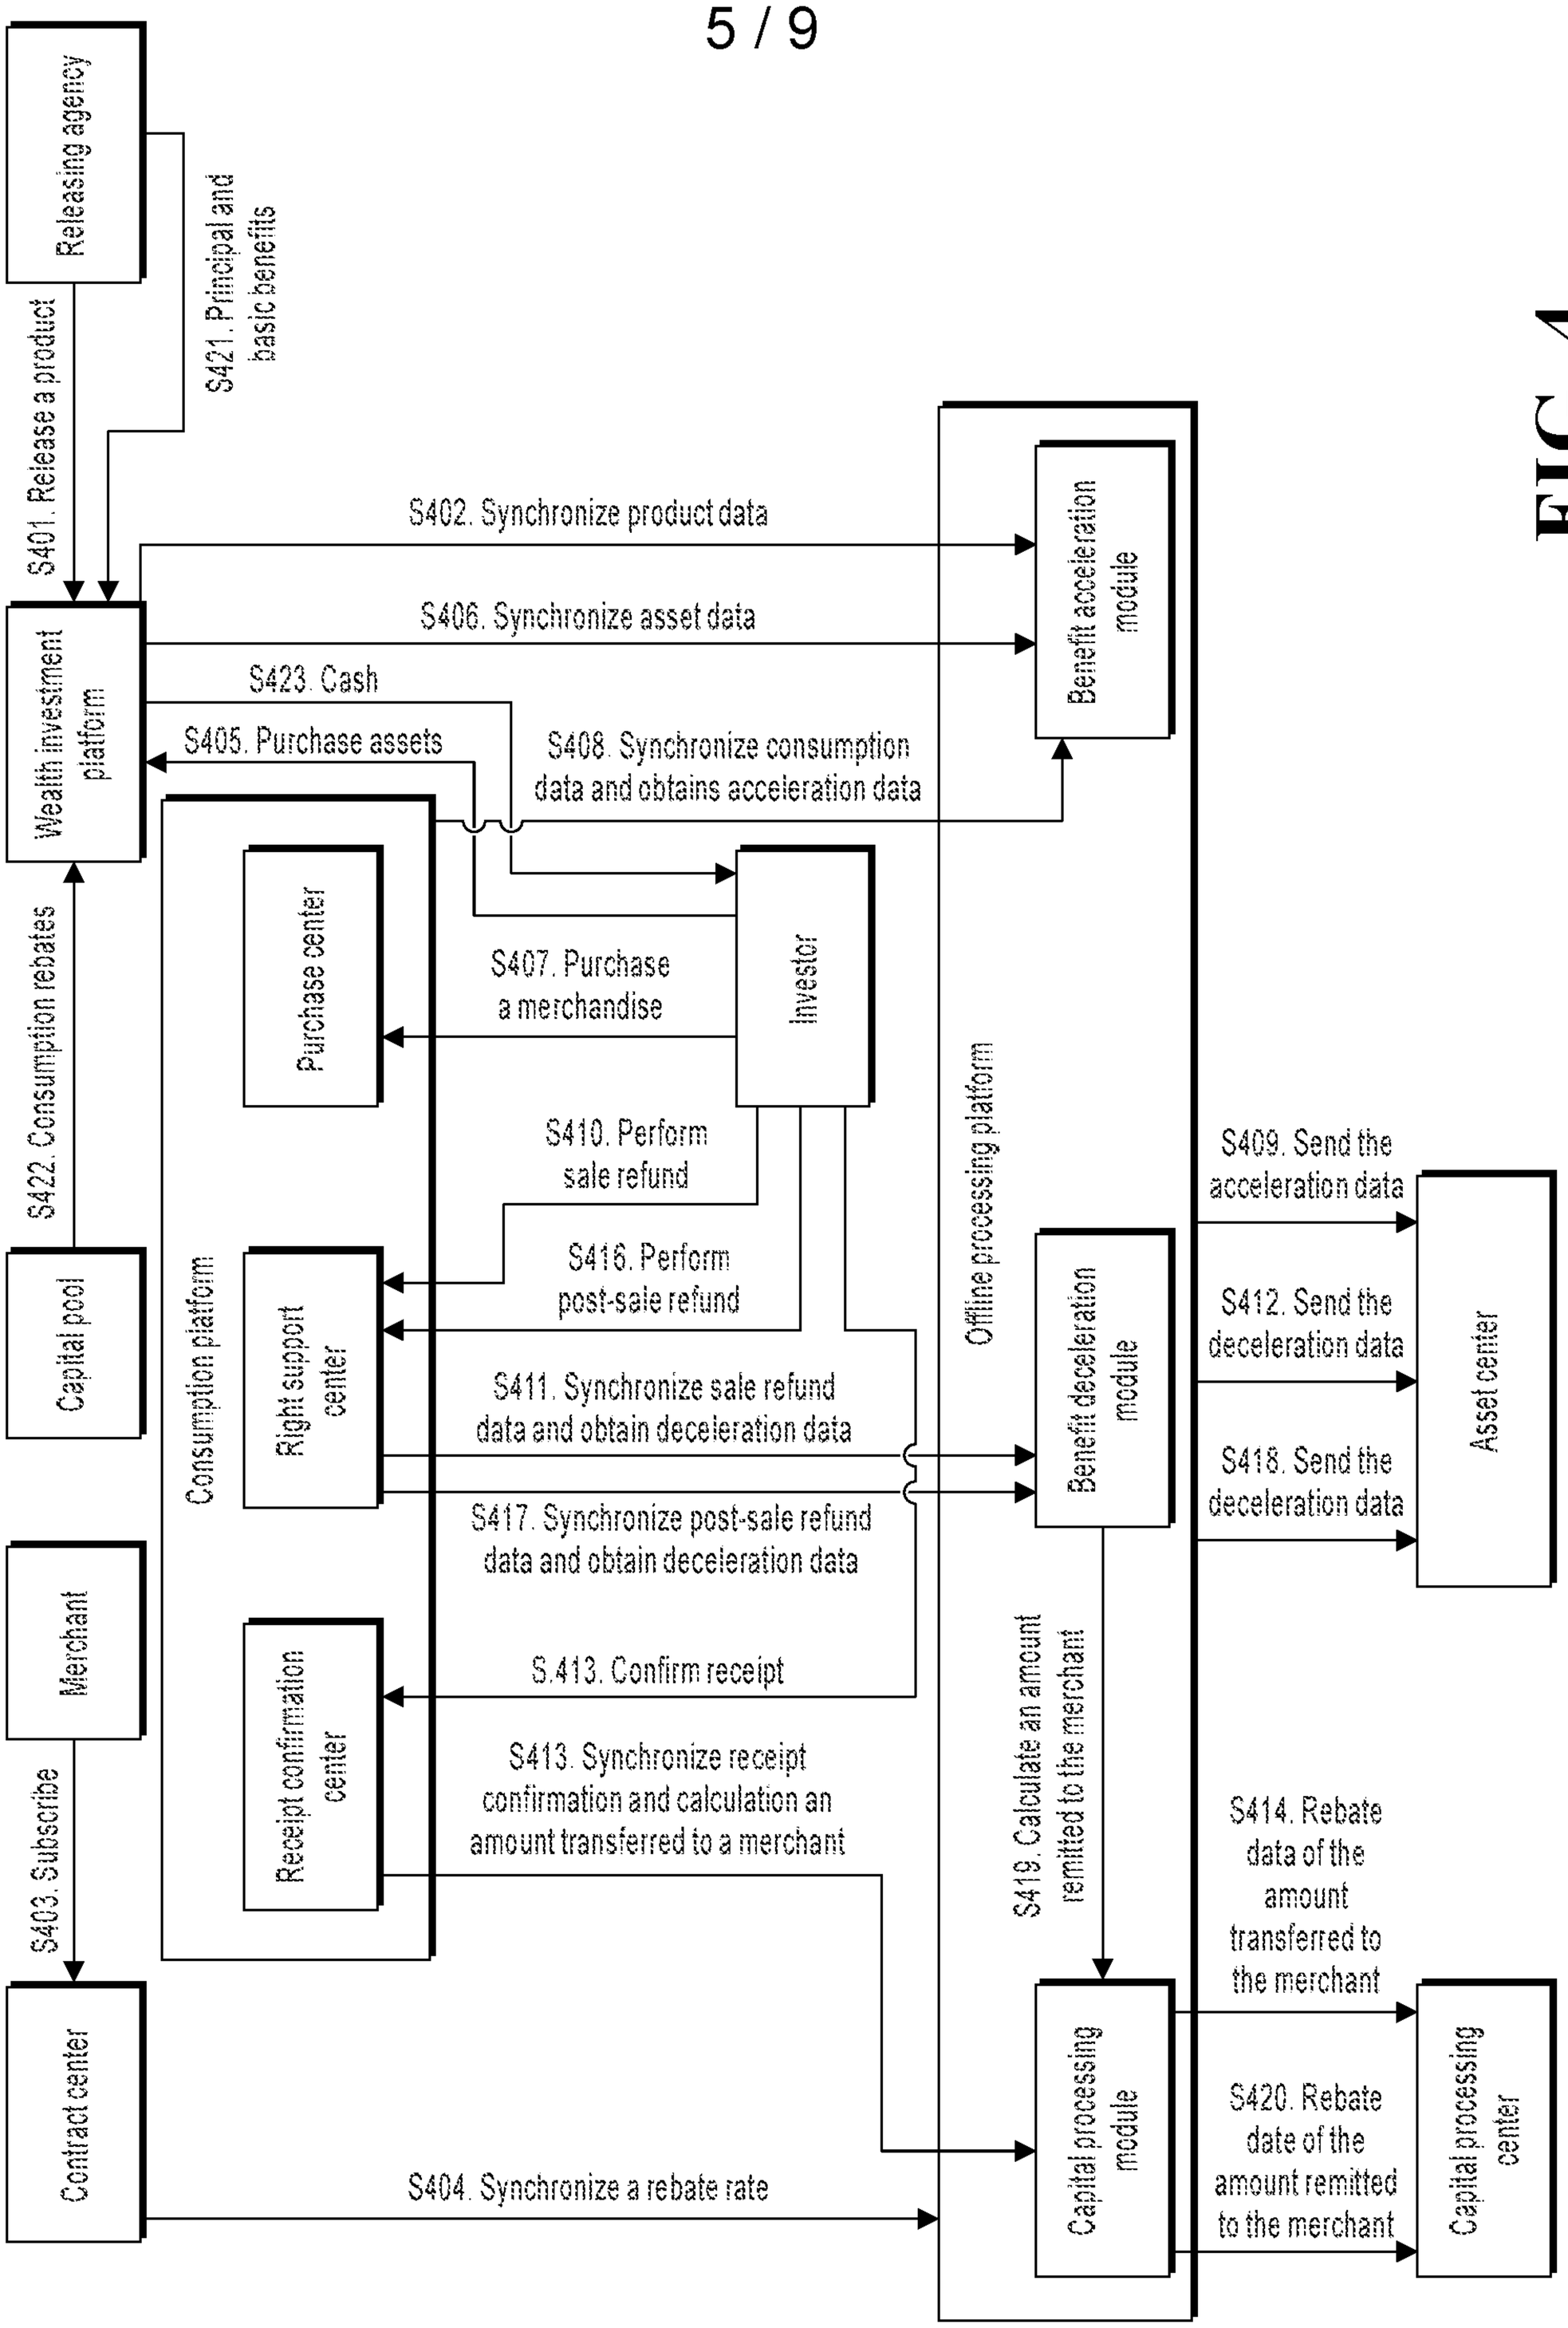

Releasing agency
S401. Release a product
S421. Principal and basic benefits
S402. Synchronize product data
S406. Synchronize asset data
S423. Cash
S405. Purchase assets
S408. Synchronize consumption data and obtains acceleration data
Wealth investment platform
Benefit acceleration module
Purchase center
S407. Purchase a merchandise
Investor
S410. Perform sale refund
S422. Consumption rebates
Capital pool
Consumption platform
Right support center
S416. Perform post-sale refund
S411. Synchronize sale refund data and obtain deceleration data
Offline processing platform
Benefit deceleration module
S409. Send the acceleration data
S412. Send the deceleration data
S418. Send the deceleration data
Asset center
S417. Synchronize post-sale refund data and obtain deceleration data
Merchant
Receipt confirmation center
S.413. Confirm receipt
S413. Synchronize receipt confirmation and calculation an amount transferred to a merchant
S419. Calculate an amount remitted to the merchant
S414. Rebate data of the amount transferred to the merchant
S403. Subscribe
Contract center
S404. Synchronize a rebate rate
Capital processing module
S420. Rebate date of the amount remitted to the merchant
Capital processing center

FIG. 4

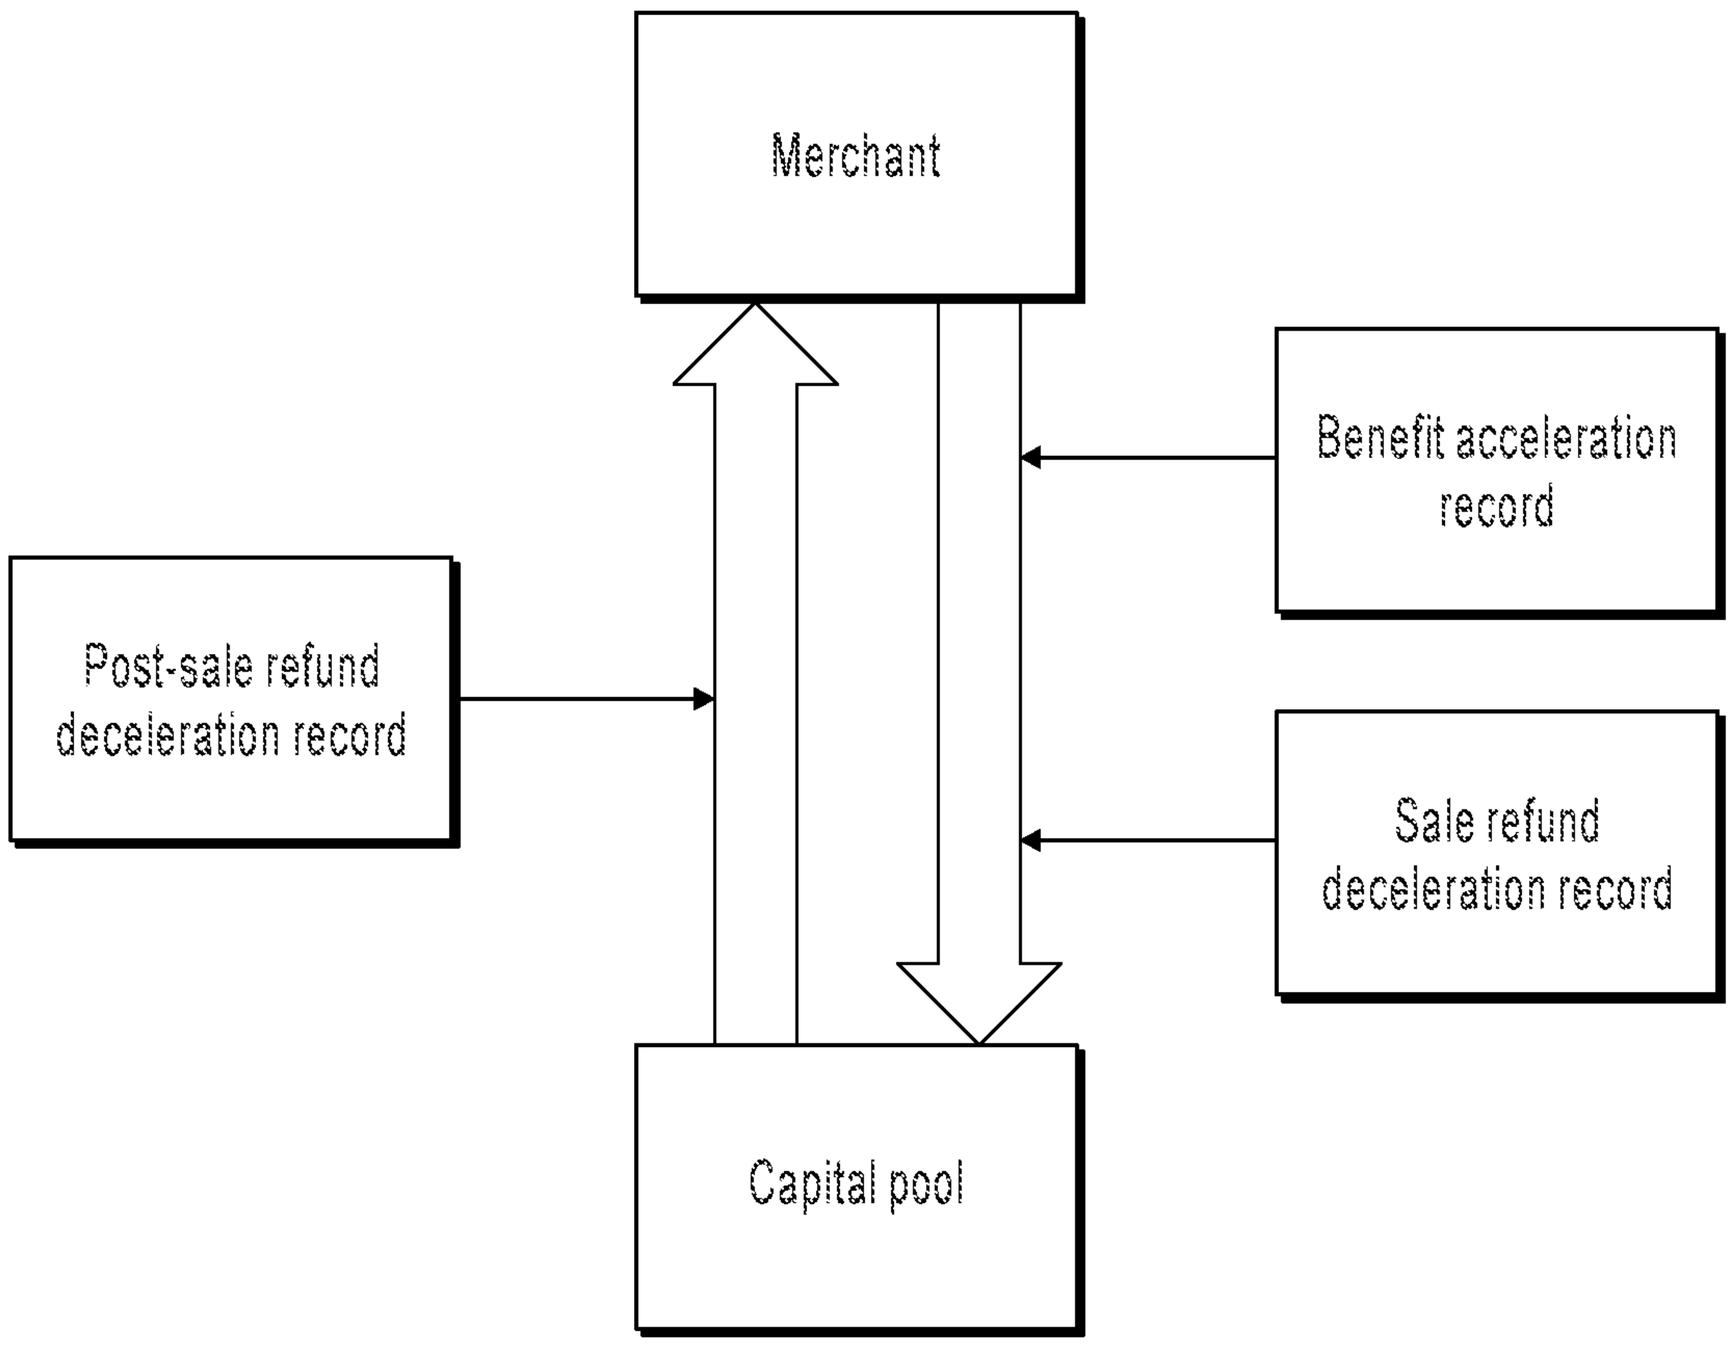

Merchant
Benefit acceleration record
Post-sale refund deceleration record
Sale refund deceleration record
Capital pool

700
Receiving unit
710
Acquisition unit
720
Transfer unit
730

FIG. 7

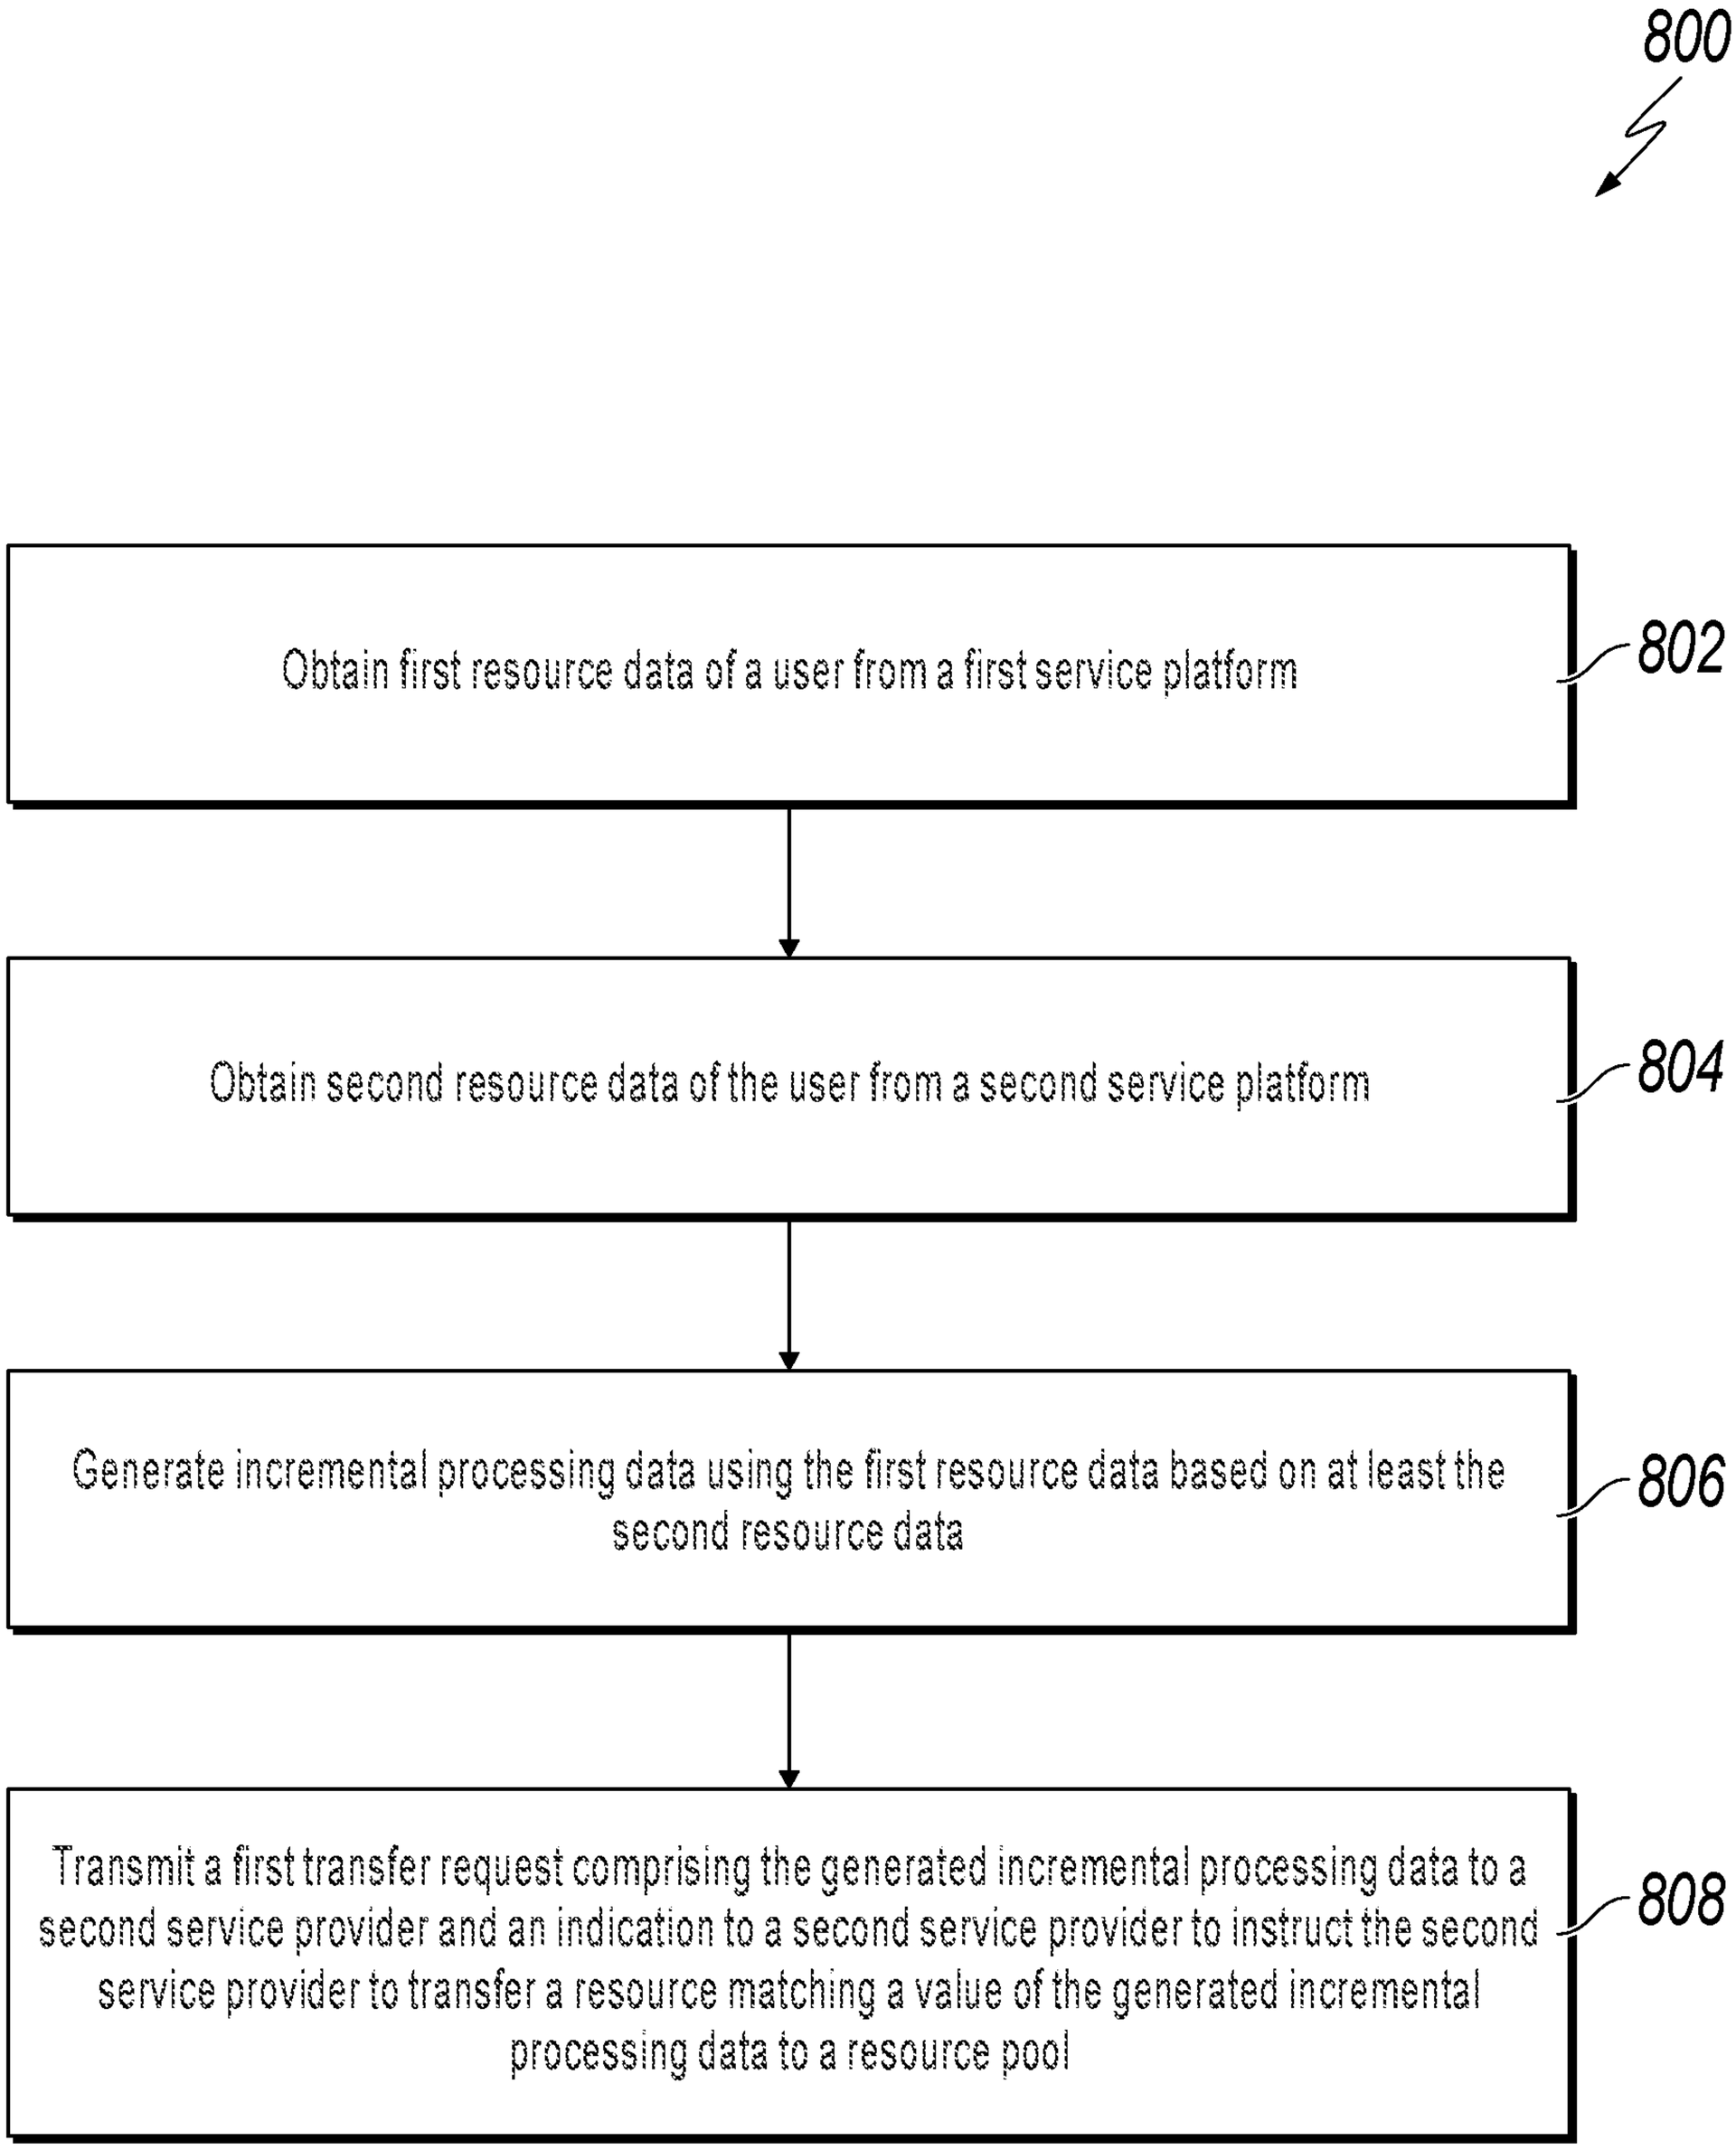

800
Obtain first resource data of a user from a first service platform
802
Obtain second resource data of the user from a second service platform
804
Generate incremental processing data using the first resource data based on at least the second resource data
806
Transmit a first transfer request comprising the generated incremental processing data to a second service provider and an indication to a second service provider to instruct the second service provider to transfer a resource matching a value of the generated incremental processing data to a resource pool
808

FIG. 8
