

MATCHING METHODS, APPARATUSES, AND DEVICES BASED ON TRUSTED ASSET DATA

ABSTRACT

Embodiments of the present specification disclose a matching method, apparatus,
5 and device based on trusted asset data. The method is applied to a blockchain
technology, and includes the following: obtaining asset description information
obtained by analyzing trusted asset data of a first entity stored on a trusted device;
obtaining service information of each second entity; determining target service
information matched with the first entity based on the asset description information
10 and the service information of each second entity; and sending the target service
information to the first entity.
