PAYMENT CARD BINDING METHOD, TRUST EVALUATION METHOD, APPARATUS, AND ELECTRONIC DEVICE

ABSTRACT

A payment card binding method, a trust evaluation method, an apparatus, and an electronic device are provided. The payment card binding method includes: sending, based on a payment card binding request sent by a payment client, a first payment request to a payment ecosystem (S110); when the payment is successful, determining, based on at least one of device data, environment data, and account data of the payment client, trust evaluation parameters corresponding to a payment card and a payment client account (S120); and performing, based on the trust evaluation parameters, binding configuration on the payment client account and the payment card (S130), the trust evaluation parameters being used to determine payment limit restrictions.
