wherein when the k-anonymized data.tb receiving means receives the k-anonymized data which is included in the k-anonymized data.tb and which has been subjected to a k-anonymization process defined in the granularity definition document.csv, the means receives an ID identifying a provider of the data and a granularity definition document No. from the data provider device.

3. The anonymized-data granularity control device according to claim 1,

wherein the service infrastructure provider device further includes:

means configured to, when a ~~the~~ data determination means determines that the data is acceptable, add a time stamp and reward information to the data; and

means configured to, when the data determination means determines that the data is unacceptable, notify the data provider device of the determination.

4. The anonymized-data granularity control device according to claim 1,

wherein the service infrastructure provider device includes:

means configured to, when a ~~the~~ data determination means determines as a result of the determination that the data is

receiving a k-anonymized data.tb generated by the data provider device based on the granularity definition document.csv, the k-anonymized data.tb including k-anonymized data; and

determining whether to accept the k-anonymized data, on the basis of granularity of the k-anonymized data and a value of k included in the k-anonymized data.tb, and

wherein it prevents a risk that personal information may be leaked from the k-anonymized data and improves fusion and analysis accuracy of a plurality of pieces of k-anonymized data.

7. The method of controlling granularity of anonymized data according to claim 6, further comprising:

when a data determination means determines that the data is acceptable, adding a time stamp and reward information to the data; and

when the data determination means determines that the data is unacceptable, notifying the data provider device of the determination.

8. The method of controlling granularity of anonymized data according to claim 6, further comprising:

when a ~~the~~ data determination means determines as a result of the determination that the data is acceptable, registering the data in a storage means; and
