

ABSTRACT
METHOD AND ELECTRONIC DEVICE FOR CREATING AN ELECTRONIC
SIGNATURE

5 A method for creating an electronic signed document
from an original electronic document includes:
generating a document-related image based on content
of the original electronic document; displaying the
original electronic document; recording a real-time
10 video of a user as the user inputs a set of signature
strokes that constitute a signature; generating a
superimposition video based on the real-time video and
the document-related image, wherein in the
superimposition video, the document-related image
15 overlaps a part of the real-time video; and generating
an electronic signed document by embedding the
superimposition video in the original electronic
document.
