

LIVING BODY DETECTION METHOD, APPARATUS AND DEVICE

ABSTRACT

5 The present specification discloses a method, apparatus, and device for liveness detection. In the method, after a preset image is displayed to a user, a face image of the user may be captured, and a to-be-verified image included in an eye image of the user may be determined based on the face image, so that liveness detection may be performed on the user based on the preset image and the to-be-verified image.
