

PORTABLE SECURING DEVICE

ABSTRACT

5 The present invention generally relates to mobility aids and in particular, but not exclusively, to a portable device for releasably securing a mobility aid such as a cane, a crutch, a pole, a walking stick umbrella or other walking aids in a desired position. The device comprises an attachment operable to be connected to a fastener for releasably securing a mobility aid in a desired position. The
10 attachment joins the fastener in a manner such that the fastener and attachment are capable of movement relative to each other in at least two planes. As such, the portable securing device may be used on a plurality of surfaces, which may be located on different planes or orientation.
