

ABSTRACT

MOTOR ATTACHMENT BRACKET, MOTOR ATTACHMENT STRUCTURE, AND SUBSTRATE PROCESSING APPARATUS

Various examples, relating to motor attachment, a motor attachment structure, substrate processing apparatus are disclosed. The present disclosure exemplifies a motor attachment bracket including a plate-shaped motor mounting portion which an output shaft insertion hole through which an output shaft of a motor is inserted penetrates, and to which the motor the output shaft of which is inserted through the output shaft insertion hole is fixed. A fluid path in which a cooling fluid is circulated is formed in a metal member formed with the motor mounting portion, a motor attachment structure using the motor attachment bracket, and a substrate processing apparatus.
