

ABSTRACT

A liquefied gas storage tank of the present invention stores liquefied gas, and comprises: a barrier that is in contact with liquefied gas, and forms a storage space for accommodating the liquefied gas; and a plurality of heat-insulating walls that are installed on
5 a support structure and are provided on the exterior of the barrier. The liquefied gas storage tank comprises: a plurality of bonding strips provided along a first direction on the outer surface fixed to the support structure, on each of the plurality of heat-insulating walls; and a plurality of sealing strips provided along a second direction different from the first direction.
