(54) Title: METHOD AND SYSTEM FOR PROCESSING ACTION DATA

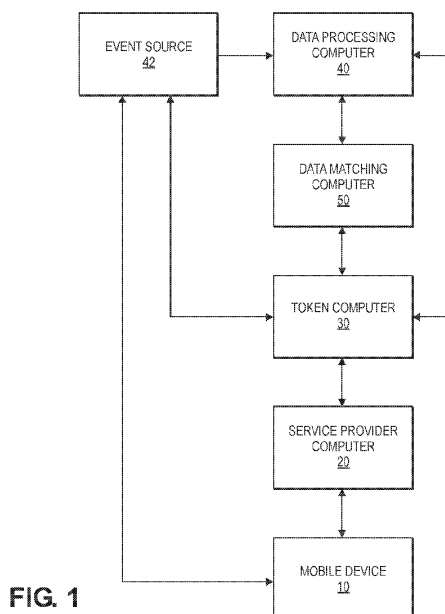

FIG. 1

(57) Abstract: A method is disclosed and includes receiving a token request message comprising a real credential or a reference to the real credential, a unique value, and action data from a token requestor, and obtaining a token. The method also includes transmitting the token to the token requestor, and providing the unique value and the action data to a data matching computer. The data matching computer stores the unique value and the action data. The data matching computer subsequently receives a message from a data processing computer comprising the unique value, determines that the received unique value matches the stored unique value, and provides the action data to the data processing computer or performs an action with respect to the action data.
