ABSTRACT OF THE DISCLOSURE

An optical pick-up apparatushas has an objective lens that focuses read/write beams onto a specific position on an optical disk. The objective lens is mounted on a movable member. The movable member is controlled to move the objective lens in a direction of its optical axis and another direction perpendicular to the optical axis direction. The apparatus further has an elastic member provided for connecting the objective lens and the movable member. A balance weight mount may be provided on the movable member so as to face the objective lens. In this case, the elastic member connects the balance weight and the mount. A holder member may be provided for swingably holding the movable member by means of suspension wires for preventing vibration of the fixed member from occurrence while operation in the optical axis direction and the other direction.
