G00001

(54) Title: **METHOD OF MANUFACTURING JEWELRY NETWORK STRUCTURES AND NETWORK STRUCTURES OBTAINED WITH SUCH METHOD**

(57) Abstract: Method of manufacturing of goldsmith network structure including the steps of providing a longitudinal warp member (2) constituted by a chain formed by one or more lines of links or modular elements and provided with interstices (3) between the links or modular elements, providing a weft member (4) constituted by a flexible threadlike core, inserting the weft member (4) in the warp member (2) along a direction substantially perpendicular to the longitudinal extension of the latter, at locations at predetermined distance (P, P', P'') from each other. The goldsmith network structure includes a longitudinal warp member (2) comprising a chain formed by one or more lines provided with interstices (3) between adjacent links or modular elements, and a weft member (4) comprising a flexible thread-like core inserted in the warp member (2) in a direction substantially perpendicular to the longitudinal direction of the latter at positions at predetermined distances (P, P', P'') from each other to define adjacent bights (6, 6') of the network structure.
