

ABSTRACT:

HEADER TAPE FOR CURTAINS AND THE LIKE

A header tape (2) for curtains or the like has loops (1) for a hook and loop fastener woven at discrete, spaced apart loop regions (6). The loops (1) are formed from a part (9a) of the warp threads (9). The back of the tape (2) is coated with an adhesive only in the loop regions (6), for fixing the loops (1). Therefore, loop-free regions (7) remain flexible and gathers (2a) can be easily made. Cords (3, 4, 5) for making the gathers (2a) are of a material which will not be adhered to by the adhesive.
