

**TITLE: MODIFIED EPOXY RESIN, EPOXY RESIN COMPOSITION AND
CURED PRODUCT THEREOF**

Abstract

(Problem) To obtain a modified epoxy resin having an elevated softening point from an epoxy resin having a low softening point without modifying the properties of the cured product and to improve the workability in the production of an epoxy resin composition.

(Means for Solving the Problem)

A modified epoxy resin obtained by adding 4,4'-dihydroxybiphenyl to a specified phenol compound and epoxidizing the resultant mixture; an epoxy resin composition containing the modified epoxy resin; and cured product thereof.
