(54) **Title**: AUDIO-VISUAL SEARCH AND BROWSE INTERFACE (AVSBI)

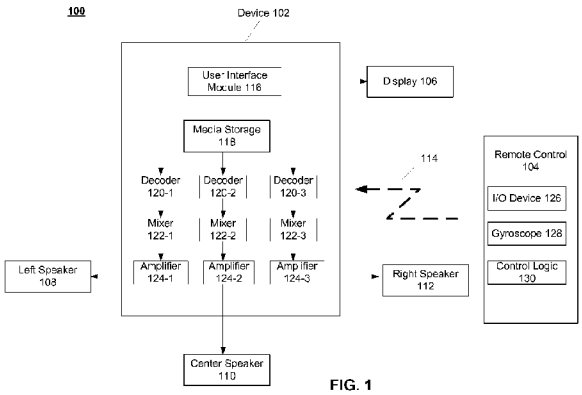

FIG. 1

(57) **Abstract**: An audio-visual search and browse interface (AVSBI) is described. In an embodiment, a user interface module displays one or more media collections, where each of the one or more media collections includes multiple clips of media. The user interface module determines a center media collection from the one or more media collections that corresponds with a slider on a user interface display. The user interface module determines a left media collection and a right media collection based on the center media collection. The multiple clips of media in the center media collection is played via a center speaker, the multiple clips of media in the left media collection is played via a left speaker, and the multiple clips of media in the right media collection is played via a right speaker, all in a simultaneous, overlapping and cyclical manner. Other embodiments are described and claimed.
