

METHOD FOR TREATING CONCENTRATED WASTE LIQUID

ABSTRACT OF THE DISCLOSURE

A method for treating a concentrated waste liquid having a high salt concentration is disclosed. The method includes the steps of mixing a sludge cake and the concentrated
5 liquid to form a sludge mixture containing the salt; and dewatering the sludge mixture containing the salt to form a dried sludge. In this method, the sludge cake and the concentrated waste liquid are mixed, and then dewatered to form a dried sludge, such that the salt in the concentrated waste liquid stays in the dried sludge.
