(54) Title: INJECTION MOLDED ARTICLE AND POLY(ARYLENE ETHER) COMPOSITION FOR USE THEREIN

FIG. 1

(57) Abstract: Injection molded articles, such as automotive headlight bezels, are formed from a composition that includes specific amounts of a poly(arylene ether), a rubber modified polystyrene, a hydrogenated block copolymer, and an aliphatic hydrocarbon resin. The injection molded articles are significantly lighter than corresponding articles prepared from both mineral filled polyester compositions and unfilled polyester compositions, so they contribute to fuel efficiency without sacrificing impact strength, heat resistance, gloss, and melt flow properties.
