

REMOTE WORK SUPPORT SYSTEM

ABSTRACT

To enable a worker who performs work to visually recognize image information from a support operator located in a remote location, as necessary, while securing a sufficient field of view and ensuring safety. A remote work support system (1) includes a wearable device (10), a mobile terminal (20), and a support operator terminal (40). The wearable device (10) includes an image capturing unit (11), a voice input unit (12), and a voice output unit (13). The mobile terminal (20) includes a display unit (21). The support operator terminal (40) transmits and receives voice to and from the wearable device (10), receives an image from the wearable device (10), and transmits an image to the mobile terminal (20).
