

ABSTRACT

The present invention aims to provide a composition for increasing leukocytes and/or basophils, a composition
5 for inhibiting epidermal growth factor receptor (EGFR) tyrosine kinase, a composition for activating innate immunity, a method of increasing leukocytes and/or basophils, a method of inhibiting epidermal growth factor receptor (EGFR) tyrosine kinase, and a method of activating
10 innate immunity. The present invention relates to a composition for increasing leukocytes and/or basophils, which contains L-ergothioneine or a salt thereof as an active ingredient.
