ABSTRACT

An anti-theft protection method and device for a cellular phone is provided. The method includes: judging whether the cellular phone satisfies a pre-set condition for starting an anti-theft mode, if so, starting the anti-theft mode; and transmitting anti-theft protection information to a designated contact to instruct the designated contact to perform anti-theft processing for the cellular phone. The device comprises a judgment module, a starting module and a transmission module. The solution relates to a field of information processing, where by transmitting the anti-theft protection information to the designated contact after starting the anti-theft mode to instruct the designated contact to perform anti-theft processing for the cellular phone, so that the designated contact will not miss the anti-theft opportunity, which contributes to get back the stolen cellular phone and can effectively reduce the chance of leaking the user's private information.
