

WASHING MACHINE

ABSTRACT

5 A washing machine of the present disclosure includes a housing,
container (24b) provided in the housing, and control device (50) disposed in
container (24b) and configured to perform a laundry operation including
washing, rinsing, and spin-drying. Control device (50) has board (71) on which
electrical component (72) is disposed, heat dissipater (73) provided in contact
10 with electrical component (72), and cover (76) disposed to cover board (71).
Cover (76) is provided with opening (76a) on a surface facing heat dissipater
(73). Heat dissipater (73) extends from electrical component (72) to at least
partially penetrate cover (76) through opening (76a).
