

AbstractMETHOD FOR CONFIGURING AND/OR CONTROLLING HOME AUTOMATION
5 TERMINALS

The present invention relates to a method for configuring and/or controlling home automation end devices, wherein the method comprises:

- 10 - establishing a wireless point-to-point connection between a control device and at least one home automation end device;
- performing a data communication between the control device and the end device by means of the point-to-point connection in order to configure and/or to control the end device;
- 15 - switching the end device to cancel the point-to-point connection and to establish a wireless connection with a mesh network; and
- performing a data communication between the end device and a hub of the mesh network by means of the mesh network in order to configure and/or to control the end device.
