

DEVICE NETWORKING ACTIVATION METHOD, APPARATUS AND CLOUD NETWORK DEVICE

ABSTRACT

Disclosed in the present invention are a device networking activation method, an apparatus, and a cloud network device. The method comprises: networking a device to be networked; in the case where said device has been networked successfully, pushing to said device an activation strategy for activating said device; and according to the pushed activation strategy, activating said device. The present invention solves the technical problem in the prior art that the networking and activation of a device to be networked are not decoupled and therefore the activation of the device has low security and reliability.
